

- Add link on serial number to open the request (in customer & admin portal)
- Add reference number on request grid (on admin portal)
- Make the validation on requests on change & on blur (not on submit)
- Open attachment on modal not on different page (make the response of the view attachement action in admin portal to return the file and display it in a fullScreenModal but if the file is a pdf leave it on another page)
- Add a page to the approved requests on the admin dashboard (like the draft requests and the rejected requests , add in the side menu an item for the approved requests and a page to see the requests)
- In national number let the validation message to be (

يجب ان يبدأ ب... ويتكون من 10 خانات

-)
 - In company number let the validation message to be (
- يجب ان يبدأ ب... ويتكون من 10 خانات) don't change the validation for this case only change the message we will change the validation after the backend do it
